NOVYRA

Meta Ads Blueprint

BANGLADESH EDITION 2026

FROM FIRST CAMPAIGN TO BETTER DECISIONS

A practical advertising playbook for small businesses,
F-commerce sellers and beginner marketers.

Local examples. Clear numbers. Reusable tools.

Bangla hooks · Campaign templates · 30-day action plan

[START HERE](#)

A blueprint for better decisions

Read it with one real offer, one customer journey and one affordable test in mind.

This guide is for Bangladesh clothing and cosmetics pages, ecommerce stores, restaurants, local service providers and the marketers who support them. You do not need a large team. You do need a clear offer, a working buying process and a way to record what happened after the click.

Use the chapters in order for a first launch, or jump to a worksheet when improving an existing campaign. Examples use fictional businesses and illustrative BDT amounts. They are teaching tools, not client case studies or market benchmarks.

RESULTS ARE NOT GUARANTEED

Advertising results are not guaranteed. Ad costs vary by auction competition, season, audience, objective, creative, offer, account history and measurement quality. A budget can be spent without producing a sale. Only test money your business can afford to lose.

How to read the recommendations

- Platform facts describe general Meta concepts. Exact labels, eligibility and available controls can change and differ by account.
- Novyra playbook choices are practical starting hypotheses, not Meta requirements or guaranteed best practices.
- Revenue examples exclude fixed overhead unless stated. Reconcile advertising reports with delivered orders, refunds and cash collected.

2026 edition • Prepared 3 October 2026. Independent educational publication by Novyra. Not affiliated with or endorsed by Meta. Facebook, Instagram and WhatsApp are trademarks of their respective owners.

Source and version notes: page 52.

NAVIGATION

Your route through the book

Learn the system, then use the tools.

01 / Foundations

Objectives, auction, readiness and offer

05**02 / Measurement & structure**

Pixel, CAPI, reporting and naming

12**03 / Audiences**

Broad, Advantage+, retargeting and lookalikes

19**04 / Creative & conversion**

Bangla copy, hooks, landing pages and messages

25**05 / Economics & optimization**

Budgets, break-even, diagnosis and policy

37**06 / The operating toolkit**

Worksheets, checklists and 30-day plan

46**Fast access**

Tool	Page
20 Bangla hooks	29–30
10 primary-text formulas	31–32
10 headline formulas	33
Budget calculator worksheet	41
Creative testing sheet	47
Daily optimization checklist	48
Launch checklist	49
30-day ad plan	50–51

[START HERE](#)

Choose a route that fits your business

The sale may happen on a website, in a chat or after a phone call.

Website checkout

Start with Sales when purchase tracking works. Judge success using delivered-order economics. Read pages 13–16, 34 and 40.

F-commerce / inbox orders

Use an eligible messaging setup and a staffed inbox. Measure qualified conversations, confirmed orders and deliveries. Read pages 9, 35 and 39.

Restaurant / local service

Restrict geography to a realistic service area. Track bookings, accepted orders or completed jobs. Read pages 20, 36 and 41.

Beginner marketer

Write a one-page brief first. Agree on the outcome, spending cap and reporting definitions with the owner. Use pages 11 and 53.

One recurring example: a fictional clothing store

Megh Studio sells one kurti for BDT 1,200. It can deliver only to selected areas, handles cash-on-delivery orders and has a limited stock of each size. The owner wants profitable delivered orders, not simply more inbox activity.

THE FIRST DECISION

Pick one offer and one destination for your first test. If customers can buy on the website or ask questions in chat, keep those paths distinguishable in your tracking.

Before you spend: write your delivery coverage, fulfillment promise, return conditions and customer-response hours. An ad cannot compensate for an unavailable size or unanswered message.

FIELD GUIDE / 01

Build the foundation

Decide what success means before deciding what to boost.

01**OFFER**

Give one customer a clear reason to act.

02**OUTCOME**

Choose the action closest to revenue.

03**READINESS**

Finish the offer brief on page 11.

YOUR OUTPUT

Finish the offer brief on page 11.

Boost Post vs Ads Manager

Both buy advertising. The difference is the control and workflow you need.

Boosting can be useful for a simple, time-limited promotion of an existing post. It is still paid advertising, and a large reaction count does not establish sales performance. Ads Manager gives you a fuller workspace for campaign structure, conversion settings, testing and reporting.

Decision	Boost Post	Ads Manager
Starting point	An existing post and simplified setup	A business goal, destination and campaign
Useful task	Local visibility or a straightforward post promotion	Structured sales, lead or messaging tests
Testing	Limited comparison workflow	Multiple creatives, breakdowns and experiment tools
Measurement	Review available post/ad results	Build columns around your actual outcome

A practical choice

A restaurant announcing a new opening time might use a small visibility promotion. A clothing store trying to find a profitable purchase cost should build a measurable campaign in Ads Manager. Neither choice removes the need for good creative, a working destination or an affordable budget.

DO NOT BUY THE WRONG SIGNAL

If the business needs purchases, a cheap engagement result is not a substitute for a purchase. Evaluate the outcome you actually paid the system to pursue.

Try this

Open your last promotion and write its result type next to its spend. Then record how many real enquiries, orders and deliveries you can verify. If those numbers are unavailable, fix the tracking process before increasing spend.

01 / FOUNDATIONS

How the Meta ad auction works

The largest budget does not automatically win every opportunity.

When an ad opportunity becomes available, eligible ads compete. Meta describes total value as a combination of the advertiser's bid, the estimated likelihood of the desired action and ad quality. This is a conceptual explanation, not a calculator for the price of your next impression. [1]

$$\text{Bid} \times \text{Estimated action rate} + \text{Ad quality}$$

What a small business can influence

- **Choose a useful event.** Tell delivery what action matters, using the selected objective and performance goal.
- **Improve the offer and creative.** Show the product clearly and make the next step easy to understand.
- **Reduce friction.** A slow page, misleading promise or weak chat response can turn attention into wasted clicks.
- **Send accurate signals.** Reliable conversion data helps the system learn from relevant outcomes.

EXAMPLE

Two kurti ads can target the same serviceable area. One shows only a logo; the other demonstrates fabric, fit and price. The second gives shoppers more useful information. Test the difference instead of assuming that a higher bid will solve the first ad.

CPM can change even when your settings do not. Competition, placement mix and demand shift. Diagnose the full funnel before treating a higher CPM as a failure.

[1] Meta, Toward fairness in personalized ads, auction explanation.

01 / FOUNDATIONS

Objectives: tell delivery what to find

An objective is a direction. The performance goal makes it more specific.

Objective	Typical purpose	Business check
Awareness	Reach or recall-oriented delivery	Did useful local exposure increase?
Traffic	Visits or link interactions	Did visitors reach the intended page?
Engagement	Interactions, views or eligible messaging goals	Were conversations or interactions valuable?
Leads	Contact enquiries through eligible forms, sites or messaging	Were leads qualified and contacted?
App promotion	App installs or in-app actions	Did useful app activity result?
Sales	Purchase or other eligible sales outcomes	Were orders profitable and fulfilled?

Use three connected settings

01

OBJECTIVE

The broad business outcome

02

CONVERSION LOCATION

Where the action happens

03

PERFORMANCE GOAL

What delivery tries to maximize

Read the current descriptions in your account. A messaging destination may appear under different eligible objectives and performance goals. Select the combination that matches your real process; do not copy a screenshot from an old tutorial blindly.

NOVYRA RULE

Write the sentence: “We will pay to find people likely to ____, and we will verify success using ____.” If the two blanks describe different outcomes, revisit the setup.

Official objective reference and account-availability caveat: [2], page 52.

01 / FOUNDATIONS

Sales, Leads, Engagement or Traffic?

Choose by the action you can measure and the way your customer buys.

Sales → ecommerce

A working checkout and reliable purchase event make Sales a sensible starting point. Track revenue quality and cancellations as well as platform purchases.

Leads → service enquiries

A cleaning service may need area, service type and preferred date. Judge qualified leads, booked jobs and completed jobs, not raw form submissions.

Engagement → conversations

An eligible messaging performance goal can support inbox selling. A “new conversation” is an opening, not an order. Add a manual sales log.

Traffic → purposeful visits

Use when reaching a page is genuinely the goal. Cheap link clicks alone do not demonstrate purchase intent or establish a winning sales campaign.

If you have few purchases

First check tracking, offer, destination and budget concentration. Low volume is not automatically solved by switching to Traffic. A nearer, measurable event may be tested deliberately, but it changes what you optimize for and what success means.

MEGH STUDIO DECISION

Website purchases are tracked correctly, so the first website test uses Sales. If the store instead takes every order in Messenger, it selects an eligible messaging setup and evaluates delivered orders per conversation. These are separate measurement paths.

01 / FOUNDATIONS

Make the business ready for paid demand

Advertising should lead to a buying experience you can support today.

- ☐ The Page shows a real business name, current contact details and a clear description.
- ☐ The business controls its Page, ad account and connected Instagram or WhatsApp assets.
- ☐ Team members have appropriate access, two-factor authentication and a recovery process.
- ☐ Currency, account time zone, payment method and spending controls have been checked.
- ☐ Prices, stock, service areas, delivery charges and return terms are visible.
- ☐ A customer can complete the full website or messaging journey on a phone.
- ☐ Someone owns customer replies and order confirmation during advertised hours.
- ☐ The business has a privacy notice and appropriate permission for customer data use.

Run a rehearsal

Ask a teammate to behave like a new shopper. They should find the price, choose a variant, enter an address and understand when payment is due. Test a failed payment, an out-of-area order and an unavailable size. Record where the journey breaks.

BLOCK LAUNCH IF

The destination fails, the advertised item is unavailable, the payment flow is broken or no one can answer enquiries. Pausing to fix these issues protects the test budget.

Avoid giving an agency your personal password. Use asset permissions and maintain business ownership. Record who can change budgets and who reviews unexpected charges.

01 / FOUNDATIONS

Offer brief: one page before one taka

Complete this before opening the campaign builder.

Business / offer / date

Customer situation and serviceable area

Specific benefit and evidence we can show

Price, variants and what is included

Delivery charge, timeline and payment options

Return / exchange conditions and limitations

Destination and primary action

Main objection and how the ad answers it

Success measure, target CPA and test spending cap

FILLED EXAMPLE

Megh Studio: everyday cotton kurti, BDT 1,200, selected delivery areas, visible size chart, fabric close-up and clearly stated exchange conditions. Primary action: website order. Business outcome: profitable delivered orders. The return reserve is included in the CPA calculation on page 40.

Keep the promise consistent across the ad, landing page, chat reply and packaging. If a discount has conditions, make them easy to find.

FIELD GUIDE / 02

Measure what matters

Connect customer actions to reporting, without confusing a signal with cash.

01**SIGNALS**

Define what each event means.

02**STRUCTURE**

Keep the first campaign understandable.

03**CONTROL**

Use a consistent event and naming map.

YOUR OUTPUT

Use a consistent event and naming map.

02 / MEASUREMENT

Pixel, dataset and Events Manager

Think “collection method, organized source, inspection workspace.”

Meta Pixel

Browser-side code that can send website actions such as page views, product views and purchases to Meta.

Dataset

The data-source container you may see in Events Manager. It can organize events coming from connected sources; labels depend on the setup.

Conversions API

A connection that can send business events from a server, partner platform or other supported integration.

Events Manager

The place to inspect incoming events, test activity and review diagnostics for your selected source.

You do not install a Pixel on a normal Facebook Page or in a Messenger conversation. Website tracking requires access to the website or an appropriate platform integration. A chat-only seller needs a separate method to record order quality.

Start with the simplest supported integration

Check your ecommerce platform's official Meta integration before adding custom scripts. Connect the intended business assets, record the source ID and document who maintains it. Avoid stacking multiple plugins that send the same action.

2026 UPDATE

Meta announced simplified Pixel and Conversions API options in April 2026. Availability can vary. Inspect your actual Events Manager options and existing integration before adding another connection. [3]

[3] Meta announcement on Pixel and Conversions API setup, April 2026.

02 / MEASUREMENT

Build and verify your event map

An event should describe something that actually happened.

Customer action	Candidate event	Verification
Product detail page loads	ViewContent	Correct product or content identifier
Item is added to cart	AddToCart	Only after a successful add
Checkout begins	InitiateCheckout	Not merely a button impression
Defined order/purchase completes	Purchase	Once per transaction; correct value and currency
Enquiry is submitted	Lead	After a successful form submission

A practical setup sequence

1. Connect the intended source through your platform integration or a developer. Confirm ownership and destination account.
2. Use Test Events and walk through the journey. Check the event name, source, timestamp, value and currency.
3. Submit one test order. Refresh the confirmation page and confirm it does not generate a second logical purchase.
4. Check Diagnostics and compare the event to the order system. Document the definition and remove or identify test records in your business reporting.

CASH-ON-DELIVERY DETAIL

If Purchase fires when a COD order is placed, it represents an order placed, not cash collected. Track confirmation, delivery and cancellation separately. Do not send a second identical Purchase for delivery without a deliberately designed event and deduplication strategy.

A received event is not necessarily an attributed ad result. Consent, identity matching, attribution settings and timing all affect what appears in Ads Manager.

02 / MEASUREMENT

CAPI: a second path for the same truth

Improve signal reliability while keeping event definitions consistent.

Conversions API can complement browser events. It does not make every event matchable, restore all lost measurement or replace privacy obligations. Partner integrations are often simpler for a small store than maintaining a custom server connection.

Deduplication in plain language

When the browser and server send the same action, use a consistent event name and matching unique event ID for that action. A new ID on every page refresh can create duplicates. Your developer or integration provider should verify the implementation against current Meta documentation. [4]

- ☐ The browser and server agree on event name, ID, value and currency.
- ☐ Each real transaction has its own stable identifier.
- ☐ Test events are visible and diagnostic issues have been reviewed.
- ☐ The integration avoids sensitive data and follows applicable permissions and Meta terms.

ASK YOUR IMPLEMENTER

"Show me one test order arriving through both paths and confirm that it is deduplicated." A green connection status alone is not a complete test.

[4] Meta Conversions API implementation references, page 52.

02 / MEASUREMENT

Reporting is attribution, not a bank statement

Keep three records and reconcile them with the same definitions.

01**ADS MANAGER**

Spend and attributed results

02**SITE / INBOX**

Orders and lead progression

03**BUSINESS LEDGER**

Delivered revenue and cash

An attribution setting determines which eligible interactions can receive credit within a specified window. Record the setting shown in your account. Compare campaigns using the same window, date range and time zone. Recent conversions can arrive late.

Why numbers differ

- An order may occur after the reporting date or after a view rather than a click.
- A shopper can switch devices or deny tracking permission.
- Several marketing channels may claim credit for the same order.
- Refunds, cancellations and failed deliveries may not reduce the original platform event automatically.

Use a lightweight source trail

Add consistent URL parameters where supported: utm_source=meta, utm_medium=paid_social, plus campaign and creative identifiers. Test the final URL. For inbox orders, record the originating campaign or ad when available, and label unknown sources honestly.

WEEKLY RECONCILIATION

Compare spend, platform purchases, store orders, delivered orders, returns and net revenue. Do not force the counts to match. Explain the gap and use a consistent business metric for decisions.

A high attributed ROAS does not prove that every sale was caused by advertising. Treat attribution as decision support, and use controlled experiments when the business has enough scale.

02 / STRUCTURE

Keep the campaign structure simple

Every extra ad set divides attention, data and budget.

What belongs where

Campaign: objective and, where selected, campaign-level budget. **Ad set:** conversion location, performance goal, audience, placement and scheduling settings; budget may sit here. **Ad:** identity, creative, copy, destination and tracking parameters.

For an affordable first test, one campaign and one main ad set with two or three distinct ads is easier to interpret than many tiny ad sets. This is a starting design, not a rule. Delivery will not necessarily spend equally across the ads.

BUDGET LOCATION

Campaign-level budgeting distributes budget across eligible ad sets. Ad-set budgets give you more direct allocation control. Neither creates a fair scientific test by itself. Use an experiment tool when you need a controlled comparison.

Separate a location or offer only when the business reason matters: different margins, service coverage, inventory or conversion path. Avoid duplicating campaigns simply to make the account look advanced.

02 / STRUCTURE

A naming system you can read at a glance

Stable names turn scattered results into a usable learning history.

Level	Pattern	Example
Campaign	Brand_Objective_Offer_Market_Date	MEGH_SALES_KURTI_BD_20261003
Ad set	Area_Audience_Event_BudgetType	DHAKA_BROAD_PURCHASE_ABO
Ad	Concept_Format_Language_Version	FABRIC_REEL_BN_V01
Test record	Date_Variable_Question	20261003_HOOK_FABRICvsFIT

Use a small shared dictionary

- **SALES / LEADS / ENG:** your chosen objective shorthand.
- **BROAD / INT / RT / LAL:** broad, interest, retargeting or lookalike intent. Verify actual audience expansion separately.
- **ABO / CBO:** team shorthand for ad-set or campaign budget; these are not promises about current interface labels.
- **BN / EN:** Bangla or English. V01, V02 and V03 identify deliberate creative revisions.

KEEP HISTORY INTACT

Names can change; platform IDs are more reliable keys. Save campaign, ad set and ad IDs in the test sheet. Record edits and dates instead of silently replacing an old creative's meaning.

Your campaign name

Your ad-set name

Your three first creative names

Never put customer names, phone numbers or sensitive information in campaign names or URL parameters.

FIELD GUIDE / 03

Find the right people

Use geography and business reality as boundaries; test audience hypotheses inside them.

01**COLD**

People who may not know the business.

02**WARM**

People with a relevant past interaction.

03**QUALITY**

A documented audience and exclusion plan.

YOUR OUTPUT

A documented audience and exclusion plan.

03 / AUDIENCES

Broad vs interest targeting

Choose a testable starting point, not a permanent belief.

Broad starting point

Use realistic location and essential eligibility controls, with minimal optional narrowing. Let the offer and creative identify the customer situation.

Interest hypothesis

Use available interests as a hypothesis about relevance. Check whether they act as suggestions or limits in the selected setup.

Broad can reduce unnecessary fragmentation, but it cannot make a nationwide audience sensible for a restaurant that delivers within a small area. Interest targeting can be useful for a focused hypothesis, but an interest label does not prove someone intends to buy.

An affordable comparison

1. Hold the offer, destination, event and creative consistent.
2. Compare one broad setup against one coherent interest hypothesis only if the budget can support both.
3. Confirm the actual audience controls and expansion behavior. Record these settings.
4. Judge qualified results and delivered-order cost, not just reach or CPC.

SMALL BUDGET CHOICE

At BDT 300 per day, splitting into many audience tests may leave every result inconclusive. Start with one sensible audience and learn from distinct creative concepts before adding complexity. This amount is a planning scenario, not a recommended minimum.

For local services, use the closest supported location controls to your actual coverage and state the service area in the ad. Verify the customer address during qualification; targeting is not a delivery guarantee.

03 / AUDIENCES

Advantage+ Audience: controls vs suggestions

Read each setting's current description before treating it as a boundary.

Advantage+ audience uses automation to find people likely to respond. Some inputs guide the system; others constrain delivery. Available controls and their labels can differ by objective, account and rollout. Confirm how your selected setup behaves before launch. [5]

Controls

Business or eligibility boundaries explicitly shown as controls, such as supported location and exclusion settings. Put non-negotiable limits here where available.

Suggestions

Inputs that may guide delivery without confining it, such as audience interests or source audiences in some setups. Do not assume delivery stays inside them.

What to inspect

- ☐ Location and any essential age/eligibility restrictions match the offer.
- ☐ A selected custom audience is identified as a limit or suggestion.
- ☐ Existing-customer exclusions are configured where available and appropriate.
- ☐ Creative and audience automation options have been previewed.
- ☐ Post-launch lead locations and customer quality are checked against the business brief.

RETARGETING TRAP

Selecting a warm custom audience as a suggestion does not create a warm-only campaign. If the interface does not support restricting delivery as intended, do not report the campaign as pure retargeting.

Automation needs a clear objective and clean signals. It cannot know that a low-cost lead is outside your delivery area unless your setup and measurement reflect that reality.

[5] Meta Blueprint, Planning for your campaign audience.

03 / AUDIENCES

Custom audiences: organize real relationships

Use eligible first-party interactions and permissioned customer data.

Source	Useful group	Quality check
Website activity	Recent product viewers or cart users	Correct event source and retention window
Facebook / Instagram engagement	Relevant recent interactions or video viewers	Interaction reflects interest in this offer
Customer list	Past buyers or qualified prospects	Permission, freshness and formatting
Other eligible connected sources	People with supported business interactions	Availability and appropriate data use

Build one audience deliberately

1. Choose the source and define the action. “All visitors” and “cart users” have different intent.
2. Choose a window that fits the buying cycle, then name it clearly: WEB_ATC_14D.
3. Review availability, population and exclusions. Matching is imperfect; uploaded rows are not guaranteed reachable people.
4. Check whether the campaign uses the audience as a restriction or a suggestion.

CUSTOMER DATA RULE

Use data you have the right to use for this purpose and follow current Meta customer-list terms and applicable requirements. Do not buy or scrape contact lists. Hashing data does not remove the need for appropriate permission.

For a small store, a very short window may be too small to deliver usefully. Combine sensible warm groups or extend the window if it still reflects genuine relevance; avoid showing the same ad excessively to a tiny group.

03 / AUDIENCES

Retarget with an answer, not a reminder alone

Warm audiences need a reason to complete the next step.

Illustrative window	Customer situation	Message to test
1–7 days	Viewed or added to cart recently	Size guide, delivery terms or product demonstration
8–30 days	Considering the category	Credible customer experience or helpful comparison
Past buyers	Potential repeat purchase	Relevant new collection or replenishment offer

These windows are teaching examples, not proven Bangladesh defaults. Match the timing to how long customers usually take to decide and whether the audience is large enough. Exclude purchasers when the offer is for first-time acquisition, where the setup allows it.

Sequence the information

01

INTEREST

Show the product and price

02

OBJECTION

Answer fit, trust or delivery questions

03

ACTION

Make purchase or enquiry easy

MEGH STUDIO EXAMPLE

A warm ad shows how to measure a well-fitting kurti and compare it with the size chart. It repeats exchange conditions clearly. It does not claim to know that the viewer abandoned a cart.

Watch frequency together with reach, spend and outcome cost. Rising frequency alone is not proof of fatigue. Rising frequency plus worsening qualified results is a reason to inspect creative, audience size and offer relevance.

Avoid stacking overlapping warm ad sets with tiny budgets. Report prospecting and retargeting separately only when the audience setup actually supports that distinction.

03 / AUDIENCES

Lookalikes: start with a meaningful seed

The source audience matters more than a clever label.

A lookalike audience seeks people similar to an eligible source audience. A source of verified buyers can encode a different signal from a source of giveaway entrants. If the seed is small, stale or low quality, the label “lookalike” does not make it a strong audience.

Stronger starting seeds

Delivered customers, repeat customers or qualified leads with a clearly documented definition and appropriate data rights.

Weaker starting seeds

Unverified enquiries, contest participants, mixed countries or old lists that no longer represent the current offer.

A disciplined first test

1. Clean the source and confirm it meets the current eligibility requirements shown in Meta.
2. Select the intended market and available similarity/range settings. Record the configuration.
3. Compare with your broad baseline using the same offer, creative and measurement definition.
4. Check whether Advantage+ treats the lookalike as a suggestion. Evaluate the actual delivery setup.

DO NOT FORCE IT

If you do not yet have a useful seed, continue improving the offer and tracking. A broad campaign with clear creative is a valid starting point; collecting poor-quality contacts just to create a lookalike is not a growth strategy.

Our seed definition

What makes these people valuable?

How and when will the seed be refreshed?

FIELD GUIDE / 04

Make the next step compelling

A clear offer, useful proof and an easy action beat a crowded design.

01**CREATIVE**

Test distinct reasons to care.

02**COPY**

Write naturally for the buyer.

03**CONVERSION**

Connect every promise to a working next step.

YOUR OUTPUT

Connect every promise to a working next step.

04 / CREATIVE

Test ideas before tiny design changes

A creative test should answer a business question.

Changing a button color may matter eventually, but a beginner learns more by comparing meaningful concepts. For Megh Studio, the first concepts are fabric comfort, fit confidence and a clear value offer. Each speaks to a different buying reason.

Concept	What the ad shows	Question
Fabric demo	Close-up, drape and ordinary use	Does seeing the material improve qualified interest?
Fit confidence	Measurements and size selection	Does reducing size uncertainty improve orders?
Offer clarity	Product, price and included value	Does a clear offer improve conversion?

Set up the learning loop

1. Write one hypothesis and primary outcome before launch.
2. Use the same offer, destination and measurement definition across the comparison.
3. Choose a maximum test spend and a review point based on affordable loss and sales lag.
4. Record results and confounders: stock changes, late replies or delivery disruption.
5. Create the next version from what you learned, not just the ad with the most likes.

A FAIR-TEST LIMIT

Multiple ads in one ad set are a practical screening method; spend is usually uneven. Low-spend ads may be untested, not losers. Use Meta's available A/B tools for a more controlled comparison when budget and volume justify it.

Keep a control creative and change one major variable for the next iteration. Save the exact asset and copy with its ad ID.

04 / CREATIVE

Static vs Reels: match the job to the format

Give each format a purpose and preview every placement.

Static / carousel

Useful for a clear offer, product range, price comparison or step-by-step detail. Use a strong focal point and readable text. Test 4:5 feed assets where supported.

Reels / vertical video

Useful for demonstrations, movement, preparation and human explanation. Start with the product or situation quickly. Use 9:16, captions and readable safe-zone text. [6]

0–3s

Show the situation
Fabric in motion

3–10s

Demonstrate
Fit + texture

10–15s

State the offer
Price + next step

The timing above is a creative exercise, not a required video length. A restaurant might show cooking, portion size and ordering coverage. A service business might show the actual work process and explain how to request a quote.

Production checklist

- ☐ The opening frame is understandable without waiting for an introduction.
- ☐ Captions remain readable and clear of placement controls.
- ☐ The final card shows the offer and one action.
- ☐ Music, footage, testimonials and faces are used with the necessary rights.
- ☐ Automated crops or creative enhancements have been previewed.

COMPARE OUTCOMES

A high video-view rate is useful diagnostic information, but the winner for a sales campaign must also make business sense.

[6] Meta for Business, Instagram & Facebook Reels ads.

Write Bangla that sounds like a real business

Use simple words, specific details and one clear next step.

Write the way a helpful salesperson answers a genuine question. State the product, benefit and terms early. Avoid cramming Bangla, English, emojis, discounts and several calls to action into the same opening line.

A practical copy structure

01**HOOK**

A relevant situation

02**VALUE**

Specific product benefit

03**PROOF**

Visible, supportable detail

04**ACTION**

One easy next step

প্রতিদিনের পোশাকে চাই আরাম আর সহজ স্টাইল।
আমাদের কটন কুর্তির কাপড় ও মাপ ছবিতে দেখে নিন।
দাম ১,২০০ টাকা। ডেলিভারি চার্জ এলাকা অনুযায়ী।
সাইজ চার্ট দেখে পছন্দের রং অর্ডার করুন।

This example names the product, gives a price and explains the action. Use “cotton” only if the material claim is accurate. Replace the delivery statement with your actual terms and keep the landing page consistent.

LOCAL CLARITY

If you accept bKash, Nagad or cash on delivery, state only the options you truly support. Explain any advance payment, delivery charge and exchange conditions before confirmation. Never ask customers for a wallet PIN or OTP.

For cosmetics, describe the product and supported features without implying a personal health condition or guaranteeing a transformation. Proof should be real, relevant and permissioned.

04 / SWIPE FILE

20 Bangla hooks / 01–10

Use these as opening lines. Add accurate product details, terms and an action.

01 প্রতিদিনের পোশাকে আরাম আর স্টাইল, একসাথে।

Clothing / everyday use

02 ছবির পাশাপাশি কাপড়টাও কাছ থেকে দেখে নিন।

Clothing / material proof

03 সঠিক মাপ বেছে নিতে আগে দেখুন সাইজ গাইড।

Clothing / fit confidence

04 একটি কুর্তি, সাজানোর তিনটি সহজ উপায়।

Clothing / styling demonstration

05 উপহার বাছাই হোক একটু সহজ।

Gift / selection help

06 নতুন রুটিনে যোগ করার আগে জেনে নিন উপাদানগুলো।

Cosmetics / ingredient information

07 পছন্দের শেডটি দিনের আলোয় দেখে নিন।

Cosmetics / realistic demonstration

08 প্যাকেটের ভেতরে কী থাকছে? চলুন দেখে নিই।

Ecommerce / unboxing

09 দাম, ডেলিভারি আর অর্ডারের নিয়ম এক জায়গায়।

Ecommerce / clarity

10 অর্ডারের আগে এই তিনটি তথ্য মিলিয়ে নিন।

Ecommerce / buying guide

ADAPT, DO NOT EXAGGERATE

A hook is a doorway into the offer. Keep the rest of the ad consistent and show the detail you promise in the opening.

04 / SWIPE FILE

20 Bangla hooks / 11–20

Practical openings for food, local services and general offers.

11 আজকের লাঞ্চ প্ল্যান? মেনুটা দেখে নিন।

Restaurant / meal occasion

12 রান্নাঘর থেকে প্যাকেট পর্যন্ত, দেখুন প্রস্তুতির গল্প।

18 ছোট একটি পরিবর্তনে সাজান পছন্দের জায়গা।

Home products / use case

19 একটি পণ্য, ব্যবহার করার কয়েকটি সহজ উপায়।

General / demonstration

20 কেনার আগে প্রশ্ন আছে? বিস্তারিত জেনে নিন।

General / conversation

CLAIM CHECK

Do not add fake scarcity, invented ratings, impossible delivery promises or guaranteed results. If you show a customer quote, obtain permission and preserve its meaning.

04 / SWIPE FILE

10 primary-text formulas / 01–05

Each formula includes a Bangla example you can adapt.

01 / Situation → benefit → action

Name a use case, explain a useful benefit and invite the next step.

প্রতিদিনের ব্যস্ততায় সহজ পোশাক বেছে নিন। আমাদের কটন কুর্তির মাপ ও রং দেখে পছন্দেরটি অর্ডার করুন।

02 / Product → detail → proof

Describe the product and show the evidence behind a factual claim.

কুর্তির কাপড়, সেলাই ও মাপ কাছ থেকে দেখুন। ভিডিওতে বিস্তারিত আছে। সাইজ চার্ট মিলিয়ে অর্ডার করুন।

03 / Question → answer → next step

Answer a frequent buying question without implying sensitive personal traits.

কোন সাইজটি নেবেন? ছবির মাপের সঙ্গে নিজের পোশাকের মাপ মিলিয়ে দেখুন। প্রয়োজনে ইনবক্সে সাহায্য নিন।

04 / Offer → inclusions → conditions

State the price and what is included, with material terms.

লাঞ্চ কন্সাতে থাকছে ভাত, চিকেন ও সবজি। দাম [মূল্য] টাকা। [এলাকা]-তে ডেলিভারি চার্জ [চার্জ] টাকা। আজকের মেনু দেখে অর্ডার করুন।

05 / Demonstration → use case → action

Show the product doing its job, then make it easy to explore.

একটি ব্যাগে প্রতিদিনের দরকারি জিনিস কীভাবে রাখবেন, ভিডিওতে দেখুন। মাপ ও রঙের বিস্তারিত জানতে পণ্য পেজে যান।

Square brackets are template fields. Replace every field and verify each factual claim before publishing.

04 / SWIPE FILE

10 primary-text formulas / 06–10

Lead with credible information, then make the action easy.

06 / Process → reassurance → enquiry

Show how the service works and what the buyer receives.

বুকিং, কাজের পরিধি নিশ্চিত করা, তারপর সার্ভিস। প্রতিটি ধাপ আগে জেনে নিন। এলাকা ও পছন্দের সময় জানিয়ে কোটেশন নিন।

07 / Customer quote → context → action

Use a real, permissioned quote; do not invent social proof.

“[অনুমতি নেওয়া গ্রাহকের আসল মন্তব্য]। [পণ্যের নাম] সম্পর্কে বিস্তারিত ও ডেলিভারির শর্ত দেখে অর্ডার করুন।

08 / Comparison → fit → choice

Compare your own options using relevant, supportable differences.

হালকা ব্যাগ নাকি বেশি জায়গার ব্যাগ? দুই মডেলের মাপ ও পকেটের পার্থক্য দেখুন। প্রয়োজন অনুযায়ী বেছে নিন।

09 / Useful checklist → product → action

Give useful selection advice before inviting the purchase.

শেড বাছাইয়ে রং, ফিনিশ ও ব্যবহারের ধরন দেখুন। আমাদের পণ্যের ছবি ও উপাদানের তালিকা পেজে আছে। বিস্তারিত দেখে সিদ্ধান্ত নিন।

10 / Real deadline → offer → terms

Use only a genuine deadline and accurately stated availability.

[তারিখ] পর্যন্ত [অফার]-এর অর্ডার নেওয়া হচ্ছে। দাম [মূল্য] টাকা; প্রযোজ্য শর্ত পেজে দেওয়া আছে। সময়ের মধ্যে অর্ডার করুন।

BEFORE YOU PASTE

Replace placeholders, verify stock and terms, and check that the destination repeats the same offer.

04 / SWIPE FILE

10 headline formulas

Short enough to scan. Specific enough to help.

Formula	Bangla example
01 · Product + price	কটন কুর্তি ১,২০০ টাকা
02 · Benefit + use case	প্রতিদিনের আরামদায়ক স্টাইল
03 · Category + new selection	দেখুন নতুন রঙের কালেকশন
04 · Decision help	সাইজ গাইড দেখে বেছে নিন
05 · Demonstration invitation	কাপড় ও সেলাই কাছ থেকে দেখুন
06 · Meal occasion	আজকের লাঞ্চ কনসেপ্ট
07 · Service + next step	ক্লিনিং সার্ভিসের কোটেশন নিন
08 · Transparent terms	দাম ও ডেলিভারি তথ্য দেখুন
09 · Product exploration	পছন্দের শেডটি দেখে নিন
10 · Help + action	প্রশ্ন থাকলে ইনবক্স করুন

How to use the library

Pair one headline with one primary-text formula and a matching visual. The headline should add clarity, not repeat a vague promise. Price headlines work only when the advertised price is current and its conditions are clear.

PLACEMENT CHECK

Headlines may be shortened or displayed differently across placements. Preview the actual ad. Put essential offer information in the creative or primary text as well; do not rely on the headline alone.

Our headline

What useful information does it add?

04 / CONVERSION

A landing page that keeps the promise

One ad, one relevant destination, one obvious action.

01 / Above the fold

Product + benefit + price + primary button

02 / Decision details

Photos, variants, measurements and ingredients

03 / Trust & terms

Real proof, contact, delivery and returns

04 / Simple checkout

Essential fields + clear order confirmation

Audit it on a phone

- ☐ The ad and page show the same product, price and offer.
- ☐ The main content loads and the button is usable on mobile data.
- ☐ Shipping areas, delivery charges and expected timing are visible.
- ☐ Size, shade or service options are understandable.
- ☐ Payment methods and any advance payment are explained.
- ☐ The checkout works and confirmation states what happens next.
- ☐ Contact information, privacy notice and applicable terms are accessible.

MEGH STUDIO FIX

If shoppers click a kurti ad and land on a crowded homepage, send them to the matching product page. Put the size chart near the size selector and explain exchanges before checkout.

Do not fill the page with fake countdowns or unverified testimonials. Reducing uncertainty is more useful than adding pressure.

04 / CONVERSION

WhatsApp & Messenger: build the conversation

A reply process is part of the campaign, not an afterthought.

Ads that open a messaging conversation can help customers ask questions before buying. Connect the correct business destination, choose an eligible objective/performance goal and test the entire handoff from a phone. Availability differs by account. [7]

01**QUALIFY**

Product + variant + area

02**CONFIRM**

Total price + terms

03**FULFILL**

Order ID + status

ধন্যবাদ! কোন পণ্য বা রংটি দেখাতে চান?

আপনার ডেলিভারি এলাকা জানালে চার্জ ও সম্ভাব্য সময় জানাতে পারব।

অর্ডার নিশ্চিত করার আগে পণ্যের দাম, মোট চার্জ ও শর্ত মিলিয়ে নিন।

Prepare the inbox before launch

- Save accurate replies for price, stock, sizes, delivery, returns and payment. Assign a human owner and publish realistic response hours.
- Record new conversation, qualified enquiry, confirmed order and delivered order as separate stages.
- Ask only for information needed at that stage. Keep customer addresses and phone numbers private.
- Use follow-up messaging only within applicable permissions and platform rules. A prior chat is not unlimited permission for promotions.

QUALIFIED CONVERSATION

Define it before reporting: for example, a shopper asks about an available item and confirms a serviceable area. Exclude spam, support requests and irrelevant chats from this business metric.

[7] Meta Blueprint, Reach your customers with ads that click to WhatsApp.

04 / LOCAL APPLICATIONS

Six business types, six useful tests

Adapt the buying journey instead of copying the same ad for every sector.

Clothing / F-commerce

Show fabric, fit and measurements. Test a size-guide concept against a styling concept. Measure delivered-order CPA and exchange rate.

Cosmetics

Show shade, texture, packaging and supported product information. Avoid medical or guaranteed transformation claims. Track order quality and repeat demand.

Restaurant

Show actual portions, menu price, opening hours and delivery coverage. Test a meal occasion. Judge accepted orders and contribution per order.

Ecommerce store

Send each ad to the matching product page. Check variant stock and checkout. Test product demonstration against offer clarity.

Local service

Show the process, service area and scope. Collect the minimum detail needed for a quote. Measure qualified leads, bookings and completed jobs.

Beginner marketer

Agree with the owner on one offer, one result definition and one spending cap. Record every material edit and reconcile outcomes weekly.

ILLUSTRATIVE RESTAURANT TEST

A lunch ad shows a real combo, its full price and eligible neighborhoods. The order log records source, accepted order, delivery and cancellation. A cheap click from outside coverage is not a useful result.

Seasonal offers need operational planning: stock, staffing, courier capacity and ordering cutoffs. Do not promise holiday delivery until the business can support it.

FIELD GUIDE / 05

Make the numbers work

A campaign can look busy and still lose money. Calculate before scaling.

01**BUDGET**

Set an affordable learning limit.

02**ECONOMICS**

Account for delivery and cancellations.

03**DECISIONS**

Choose a justified keep, fix or pause action.

YOUR OUTPUT

Choose a justified keep, fix or pause action.

05 / ECONOMICS

Budgeting for a Bangladesh small business

Plan in BDT; reconcile the amount your account and payment provider actually charge.

Daily media scenario	7-day media spend	Practical scope
BDT 300	BDT 2,100	One focused offer and a small creative screen
BDT 500	BDT 3,500	One main test with a little more observation
BDT 1,000	BDT 7,000	More observation or a deliberate second test

These are arithmetic scenarios, not market benchmarks, minimums or expected performance. At a hypothetical BDT 250 CPA, BDT 500 per day represents only two expected actions on average if that CPA were achieved. Real results can be zero or highly uneven.

Build a complete cash plan

- Reserve media spend separately from creative production, website tools and agency fees.
- Allow for payment-provider fees, applicable taxes and exchange-rate effects. Check current invoices and your payment provider; no fixed tax or exchange rate is assumed here.
- Protect stock, fulfillment and refund cash. Advertising may be charged before COD revenue arrives.
- Inspect daily/lifetime budget behavior and any account or campaign limits. Do not assume a daily budget is a strict daily billing cap.

NOVYRA TEST RULE

Set the total affordable loss first. Choose the number of days and tests that fit inside it. If the budget cannot generate enough meaningful observations, simplify the test rather than creating many small ad sets.

Use a lifetime budget or available spending controls when suitable, monitor actual spend and record the account currency and time zone.

05 / MEASUREMENT

CPC, CTR, CPA and the metrics between

Use the right numerator, denominator and result definition.

Metric	Formula	What it helps diagnose
CPM	$\text{Spend} \div \text{impressions} \times 1,000$	Cost of exposure
Link CTR	$\text{Link clicks} \div \text{impressions} \times 100\%$	Response to the ad
Link CPC	$\text{Spend} \div \text{link clicks}$	Cost of a click
Landing-page arrival rate	$\text{Landing-page views} \div \text{link clicks}$	Post-click loading or measurement loss
Purchase conversion rate	$\text{Purchases} \div \text{landing-page views} \times 100\%$	Observed page-to-order conversion
CPA	$\text{Spend} \div \text{chosen actions}$	Cost per defined outcome
ROAS	$\text{Attributed purchase value} \div \text{ad spend}$	Attributed revenue efficiency
Frequency	$\text{Impressions} \div \text{reach}$	Average exposures per reached person

Worked example: fictional campaign

BDT 3,000 spend; 30,000 impressions; 600 link clicks; 480 landing-page views; 12 orders placed. CPM = BDT 100. Link CTR = 2%. Link CPC = BDT 5. Arrival rate = 80%. Purchase conversion rate = 2.5%. Cost per placed order = BDT 250.

FOLLOW THE ORDER

If only 9 of those orders are delivered, delivered-order CPA is $\text{BDT } 3,000 \div 9 = \text{BDT } 333.33$. The cheaper placed-order number does not pay the bills.

Use the same reporting cohort where possible. “All clicks” differs from “link clicks.” Division by zero is undefined: show “no results yet,” not a zero CPA. There is no universal good CTR or CPC for every Bangladesh business.

05 / ECONOMICS

Break-even math for COD orders

Separate the margin on a delivery from the risk of an order failing.

Megh Studio: illustrative inputs	BDT
Selling price / delivered order	1,200
Product cost	600
Packaging	30
Seller-paid delivery subsidy	70
Payment / COD fee	20
Delivered-order contribution before ads	480

Assume 80% of placed orders are delivered and paid, with no later refund. Each failed order loses an average BDT 100 in unrecovered delivery, handling or damage costs. The product is assumed recoverable; otherwise add its loss. These are example inputs, not Bangladesh averages.

EXPECTED CONTRIBUTION PER PLACED ORDER

$$0.80 \times 480 - 0.20 \times 100 = \text{BDT } 364$$

This is the break-even media CPA per placed order, before fixed overhead.

If the owner reserves BDT 100 per placed order for overhead and desired profit, the target media CPA becomes **364 – 100 = BDT 264**. At 20 placed orders: 16 deliveries contribute BDT 7,680; 4 failures cost BDT 400; BDT 5,280 ads leave BDT 2,000 before fixed overhead.

ROAS CHECK

Expected realized revenue per placed order = $0.80 \times 1,200 = \text{BDT } 960$. Break-even realized-revenue ROAS = $960 \div 364 = 2.64\times$. If Meta records all placed-order value, its apparent break-even ROAS is $1,200 \div 364 = 3.30\times$. Definitions matter.

05 / WORKSHEET

Your budget calculator

Fill in your own costs. Use a consistent cohort and currency.

Input	Example	Your value
A · Price per delivered order	1,200	
B · Product cost	600	
C · Packaging + subsidy + payment fees	120	
D · Contribution per delivery = $A - B - C$	480	
E · Delivery-and-payment rate (decimal)	0.80	
F · Average unrecovered loss / failed order	100	
G · Reserve / placed order for overhead + profit	100	
H · Break-even placed CPA = $E \times D - (1 - E) \times F$	364	
I · Target placed CPA = $H - G$	264	
J · Planned placed orders	20	
K · Planned media envelope = $I \times J$	5,280	

This envelope is affordable only if the assumptions hold. It does not guarantee J orders. Add separate reserves for creative, tools, applicable charges and working capital. If H or I is zero or negative, improve price, costs, order quality or offer economics before buying more demand.

For lead-based businesses

Maximum lead cost = lead-to-completed-job rate × contribution per completed job – per-lead handling cost – reserve. Example: $10\% \times \text{BDT } 2,000 - \text{BDT } 20 - \text{BDT } 50 = \text{BDT } 130 \text{ target CPL}$. Use completed jobs, not only booked appointments.

UPDATE THE INPUTS

Replace estimated delivery and close rates with observed cohort results. Include later returns, discounts and unrecoverable product losses. Recalculate when the product, courier or offer changes.

05 / DIAGNOSIS

Clicks but no sales: inspect in order

Find the largest break in the journey before changing the audience.

01 / No meaningful delivery

Check review status, payment, schedule, restrictions and audience feasibility.

Do not repeatedly edit while the ad is under review.

02 / Impressions, weak response

Check whether the first frame, price and offer are understandable.

Test a materially different concept.

03 / Clicks, few page arrivals

Open the exact ad URL on a phone; check speed, redirects and measurement.

Fix the destination before increasing spend.

04 / Page arrivals, no checkout

Check price, product match, variants, trust and delivery terms.

Remove uncertainty near the purchase decision.

05 / Checkouts, no completed orders

Test payment, form errors, final charges and COD confirmation.

Rehearse the full order path.

06 / Orders, few deliveries

Check address quality, confirmation, stock and courier performance.

Use delivered-order economics to judge the campaign.

VERIFY MEASUREMENT FIRST

A broken Purchase event can make a working campaign appear empty. Conversely, duplicate events can hide a failing campaign. Compare with your order system.

If the budget bought only a handful of visits, the honest answer may be “insufficient evidence.” Use your predetermined loss limit; do not keep spending merely to prove the campaign can work.

05 / OPTIMIZATION

Scale after the business result holds

Growth means more profitable fulfilled demand, not just a larger daily budget.

Before increasing spend

- ☐ Results cover a sensible decision window and include conversion/fulfillment lag.
- ☐ Delivered-order or qualified-lead economics meet the business target.
- ☐ Tracking is stable, with no obvious duplicate or missing-event issue.
- ☐ Stock, staffing, response time and delivery capacity can support more volume.
- ☐ Working capital can absorb ad charges and delayed COD receipts.

Two ways to grow

Increase the budget deliberately

Make a modest change that fits the cash plan; record the amount and date. Let results mature before another change. No percentage guarantees stable delivery.

Expand the learning

Add a new creative concept, adjacent serviceable area or relevant offer. Change one major dimension at a time so the result remains interpretable.

Judge incremental economics. If BDT 5,000 produced 20 orders and the next BDT 5,000 produced only 10 more, the additional orders cost BDT 500 each even though the combined average is BDT 333.33. Compare the extra volume with its contribution.

WHEN TO STEP BACK

If marginal cost worsens, deliveries fall or fulfillment breaks, stop increasing spend. Diagnose the change, restore a manageable level or pause the failing part. An old winning CPA is not a promise about the next budget.

Refresh creative when the evidence supports it. A new concept can be more useful than repeatedly duplicating the same campaign.

05 / OPERATIONS

Common mistakes that hide the real problem

Use this page as a review conversation with the business owner.

Mistake	Better operating habit
Optimizing for likes while needing orders	Choose and report the nearest useful business outcome.
Many ad sets on a small budget	Concentrate learning around one clear test.
Changing settings every few hours	Agree on a review point and log material changes.
Calling an ad a loser after little delivery	Separate “under-tested” from “performed poorly.”
Judging only the last calendar day	Allow for conversion lag and compare like periods.
Ignoring cancellations and refunds	Track placed, confirmed, delivered and net revenue.
Copying another brand’s claims	Use your own evidence, offer and permissioned assets.
Running messages without reply capacity	Staff the inbox and publish realistic response hours.
Increasing spend when stock is low	Tie scaling decisions to inventory and fulfillment.
Treating every Meta recommendation as an instruction	Evaluate its fit with the business objective and constraints.

THE EDIT LOG

For each change, write: what changed, why, when, expected effect and next review date. If five things change at once, you may improve results without learning which change caused it.

For “Preparing,” review or delayed delivery, inspect the account’s status details and help guidance. There is no guaranteed approval or delivery-start time. Escalate a persistent issue through the available support process rather than creating repeated duplicate campaigns.

05 / POLICY

Policy checks belong in the creative brief

Review the ad, destination and business behavior together.

Meta reviews more than a headline. Images, copy, targeting, destination quality and advertiser behavior can matter. Ads can be reviewed again after publication. Approval is not a permanent guarantee of compliance.

[8]

Risk	Practical check
Personal attributes	Avoid wording that asserts or implies sensitive traits about the viewer. Describe the product or general situation.
Misleading outcomes	No guaranteed income, impossible results, invented reviews or unsupported health/beauty claims.
Offer mismatch	The ad and destination must agree on the item, price and material conditions.
Restricted categories	Check current rules, age/location restrictions and any special-category requirements for the actual offer.
Rights and authenticity	Use original or licensed assets and real business information.
Data misuse	Do not collect or send prohibited sensitive data; follow applicable permissions and Meta terms.

Cosmetics copy example

Risky: “Your acne will disappear in three days.” It implies a personal condition and promises an outcome.

Safer direction: “Explore the cleanser’s ingredients and usage instructions.” The product and all accompanying claims still need to comply.

IF AN AD IS REJECTED

Read the stated reason, inspect the whole ad and destination, correct the actual issue, or request review when you believe the decision is mistaken. Do not evade enforcement with replacement accounts or disguised claims.

Consult the current Advertising Standards before launch. This educational checklist is not legal advice or a guarantee of approval.

[8] Meta Blueprint advertising-standards training and current policy portal.

FIELD GUIDE / 06

Turn the guide into a routine

A small, repeatable operating system for the next 30 days.

01**PREPARE**

Launch with clear definitions and limits.

02**REVIEW**

Make one evidence-based decision at a time.

03**REPEAT**

Keep the completed worksheets as your playbook.

YOUR OUTPUT

Keep the completed worksheets as your playbook.

06 / WORKSHEET

Creative testing sheet

Duplicate this page for each test. Keep the asset files and platform IDs together.

Test name / owner / start date / review date

Offer / destination / audience / event definition

Hypothesis: if we change ____, we expect ____ because ____

Primary metric / target / maximum test spend

Record	Creative A	Creative B	Creative C
Concept / hook			
Ad ID / version			
Format / language			
Spend / impressions			
Link clicks / page views			
Qualified leads or placed orders			
Delivered orders / net revenue			
CPA / business contribution			
Decision: keep / revise / pause / insufficient			

Confounders: stock, replies, payment issues, edits or holidays

What we learned and the next single change

INTERPRETATION

Unequal spend means unequal evidence. Do not calculate CPA when results are zero. Record the spend with “0 results” and decide against the loss limit and funnel evidence.

06 / CHECKLIST

Daily optimization: inspect, then decide

A daily health check is not a daily settings-change requirement.

- ☐ Check account access, billing, delivery status and policy alerts.
- ☐ Compare actual spend with the budget envelope and remaining cash plan.
- ☐ Confirm the promoted item is in stock and the destination still works.
- ☐ Check tracking diagnostics and compare recent orders with the business log.
- ☐ Review messages: response time, spam, relevance and serviceable locations.
- ☐ Record spend, useful results, placed orders and deliveries with consistent definitions.
- ☐ Inspect major funnel changes using an appropriate window, not a few isolated clicks.
- ☐ Allow for reporting lag and incomplete delivery cohorts.
- ☐ Read customer questions for missing creative or landing-page information.
- ☐ Log any material change and its reason; set the next review point.

A simple decision rule

Fix immediately

Broken links, incorrect prices, serious policy issues, payment failure or unavailable stock.

Observe until the review point

Normal short-term variation with working tracking, valid delivery and remaining test budget.

Pause or revise

Loss limit reached, a demonstrated journey failure or persistently poor business economics.

Increase cautiously

Mature results meet the target and operations can support the additional demand.

If nothing material has changed, “no edit today” can be the right decision. Use the time to improve proof, customer service or the next creative concept.

06 / CHECKLIST

The launch checklist

One final pass before you publish.

Business & offer

- ☐ Correct product, price and inventory.
- ☐ Accurate delivery, payment and return terms.
- ☐ Serviceable geography and realistic promise.
- ☐ Owner, response hours and order log ready.

Campaign & audience

- ☐ Objective, location and performance goal align.
- ☐ Correct Page, ad account and destination.
- ☐ Audience controls and suggestions understood.
- ☐ Required exclusions and category settings checked.
- ☐ Budget, schedule, currency and time zone verified.

Creative & destination

- ☐ Every placeholder replaced.
- ☐ Claims and testimonials substantiated.
- ☐ Images, music and customer content authorized.
- ☐ Mobile placement previews reviewed.
- ☐ Working link or messaging handoff.
- ☐ Offer matches the landing page or chat reply.

Measurement & protection

- ☐ Test event/order completed successfully.
- ☐ Deduplication checked if Pixel and CAPI overlap.
- ☐ Attribution setting and source parameters saved.
- ☐ Spending cap and review date agreed.
- ☐ Privacy, access and current policy checks done.

AFTER PUBLISHING

Save campaign/ad IDs and launch time. Verify status and actual delivery. Complete another customer-path check from the published destination; do not assume the preview proved everything.

Launch owner / date / approved media envelope

First review date / stop condition

06 / 30-DAY PLAN

Days 1–14: prepare and launch

A calendar gives structure. Evidence determines whether you advance.

Day	Action	Deliverable
1	Choose one offer and business outcome	Completed offer brief
2	Map coverage, stock and fulfillment	Operational limits
3	Calculate contribution and target CPA	Budget worksheet
4	Select website, lead or messaging journey	Customer-path map
5	Configure or audit tracking / order log	Event definitions
6	Test the full mobile journey	Issues fixed
7	Review policy, assets and permissions	Ready-to-create checklist
8	Write three concept briefs	Fabric / fit / offer, or sector equivalents
9	Produce creative and Bangla copy	Two or three usable ads
10	Build campaign and naming structure	Saved draft + IDs when available
11	Complete launch checklist and publish	Budget cap + review point
12	Inspect technical health and replies	Health log
13	Review early funnel signals	No premature winner
14	First planned review, if evidence is adequate	Keep / fix / pause / continue observing

IF YOU ARE NOT READY

Move the launch date. A broken checkout or incomplete tracking is a reason to repair, not a reason to spend simply to stay on schedule.

Treat Days 12–14 as observation and issue detection. Small-budget campaigns may need longer to provide useful evidence. Stay within the original affordable-loss limit.

06 / 30-DAY PLAN

Days 15–30: learn, refine and decide

Turn the first test into a documented next step.

Day	Action	Deliverable
15	Reconcile platform and business results	Placed vs delivered comparison
16	Inspect recurring customer questions	Objection list
17	Choose the largest fixable friction	One improvement brief
18	Produce one meaningful creative revision	New version and hypothesis
19	Launch the next bounded test	Fresh test record
20	Check destination, stock and replies	Operational health check
21	Review warm-audience size and relevance	Retarget / postpone decision
22	Use a warm-audience test only if justified	Clear controls and message
23	Review lead and delivery quality	Updated quality rates
24	Recalculate target CPA with observed inputs	Revised economics
25	Review marginal cost and cash capacity	Scale-readiness decision
26	Make one measured change if supported	Edit log entry
27	Allow results to mature; monitor health	Stable observation
28	Review creative fatigue and new objections	Next concept backlog
29	Reconcile spend, delivery, refunds and revenue	Monthly business report
30	Choose next month's offer, test and cap	One-page growth plan

SUCCESS AFTER 30 DAYS

You have a working measurement process, a realistic cost model and a clearer view of what to test next. A profitable campaign is possible, but it is not promised.

YOUR NEXT CHAPTER

One offer. One test. One clear decision.

Keep this page beside the campaign dashboard.

The customer and situation we serve

The offer and evidence we will show

The buying path and outcome we will measure

Our target cost and total affordable test loss

Our first three creative concepts

The issue that would make us pause immediately

The date and evidence required for our next decision

What we learned, and what we will change next

THE NOVYRA OPERATING PRINCIPLE

Build a clear offer. Measure honestly. Learn within a limit. Scale only when the business can support it.

NOVYRA

Practical knowledge. Better business decisions.

Results are not guaranteed. Ad costs vary. Use your own margins, customer data and operational capacity to decide what comes next.
